

A FIXED-PRICE PROGRAMME FOR PRODUCTION READY AI

One production AI model. Twelve weeks. Fixed price.

You already have the data. The problem is getting from data to a model your underwriters, claims managers, or operations team actually use without a twelve-month programme that ends in a prototype. Accelerate delivers one production-ready AI model, embedded in your systems and validated against live data. The use case is yours to define. The methodology is ours.

01 SCOPE What we build for insurance and re/insurance clients

USE CASE	WHAT IT DELIVERS
01 Submission Triage & Prioritisation	NLP model scoring inbound risks by quality and fit before an underwriter touches them. 30-40% reduction in non-productive handling time
02 Pricing Augmentation	ML ensemble trained alongside your actuarial baseline, identifying pricing signals your models currently miss. measurable loss-ratio improvement on A/B cohort
03 Slip & Endorsement Extraction	Custom NER model extracting structured data from London-market slips, endorsements, and binder documents. 70-80% reduction in manual keying
04 Reserve Adequacy Monitoring	Model flagging adverse reserve development against peer cohort benchmarks. earlier action, cleaner regulatory audit trail
05 Large Loss Early Warning	Predictive model identifying claims likely to develop significantly, based on early file indicators. 10-15% IBNR accuracy improvement
06 Claims Document Intelligence	Automated classification, extraction, and routing of claims documents. 20-30% reduction in processing time

Use case is determined by your highest-value, data-ready problem. The above are the most common starting points.

02 METHOD How it works — twelve weeks, four phases

01 WEEKS 1 - 3	02 WEEKS 4 - 8	03 WEEKS 9 - 11	04 WEEK 12
Discovery & Data Audit We assess your data, align on the use case, and establish a measurable baseline. HARD GO / NO-GO GATE	Model Development Feature engineering, training, backtesting, and benchmarking against your baseline. You see performance before it goes near production.	Integration & Deployment Production deployment into your existing stack. User training. Your team operates the model from day one.	Validation & Handover Live performance validation. ROI measurement. Full knowledge transfer.

03 COMMERCIALS Pricing — fixed fee, no T&M overruns

TIER	FIXED FEE	PAYMENT SCHEDULE
Mid-market	\$185,000 AED 680,000	40% ON SIGNATURE 30% ON MODEL VALIDATION
Standard	\$240,000 AED 880,000	30% ON HANDOVER
Complex / multi-source	\$330,000 AED 1,210,000	Pre-priced change-order schedule available on request.

04 TRACK RECORD Insurance & re/insurance credentials

Live AI systems operating across in excess of \$250M GWP, deployed into production environments across the London and DIFC markets.

- LONDON
- DIFC
- ADGM

We have scoped and delivered AI use cases for underwriting augmentation, claims intelligence, and operational automation — under model risk frameworks, external audit, and regulatory scrutiny across FSRA, London-market, and UAE Insurance Authority requirements.

Reference engagements include a UAE national energy authority and a top-3 UAE commercial bank, both with production AI systems delivered and validated against live operational data.

05 FIT Is Accelerate right for you?

Yes — THIS WORKS

You have a defined prediction or process problem, accessible data, an executive sponsor with budget authority, and a twelve-week timeline that fits your planning horizon.

No — THIS WON'T

The problem isn't yet defined, data isn't accessible, or your procurement cycle alone takes longer than twelve weeks.

We will tell you this in the first conversation.
